 75 IN THIS FIELD.

Industrial sewer surcharge is based on the BOD / TSS content of the sites effluent, using the existing formula and rules. Industrial accounts have a field for this surcharge, located on the second screen (financial screen) of each record. This charge will be calculated manually, and entered into this field.
 Monthly charges are calculated as follows: Readiness to serve charge (whatever categories are required) + Water use charge + Sewer use charge (when property is sewered) + fire protection fee for customers with fire protection meters + Surcharge for industrial class when required. If service is added after Jan-Feb Average period, then placing consumption into the avg. sewer consumption field sets the sewer charge for Mar thru Dec. For 2006, this value is 6. This value should be calculated each year in March, before billing. Residential / DUP / TRI OR IRRIGATION; Meter sizes can be ¾" to 1½". Multiplex can be 1" to 6". Non-potable can be 4" to 12" Hydrant water can be only 1½" Jan 2007.doc – SDH -FINAL 12-2006 Board reconsider ERU – Feb 27 2007 -Red Oak Study-October 2008 Water -rounded to nearest \$0.05 – Sewer rounded to nearest \$0.05
